

DEVONS

SPECIAL SPINNING BAIT

The company «RB» offers fishing baits — DEVON baits.

DEVON is a special spinning bait, created for catching predatory fish. The native land of this unique spoon-bait is England, where people have been catching salmon on them since the 19th century. In Russia DEVONs appeared at the beginning of the 20th century, where people successfully caught chub, pike-perch, perch and other predatory fish on them.

The launch by «RB» company, in 2006, of DEVONs with the microbearing created a boom on the counters of Russian fishing shops.

The secret of DEVON's success is not only the use of the outstanding patented concept of the rotation of bait's propeller, but also in the application of high-technology manufacture and a multistage quality control of production.

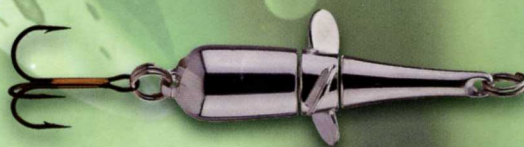

Nowadays, the «RB» company is one of the most advanced enterprises in Russia manufacturing fishing tackle. For the last 2 years, the company has participated in more than 40 exhibitions. Now, DEVONs on the microbearing are in practically all large fishing shops in Russia.

The DEVON's propeller rotates about the axis and creates bright patches of light and high-frequency hydroacoustics, attracting fish and inducing them to strike the bait.

Ease of rotation of the propeller is achieved by use of the microbearing (made of stainless steel) constructed of a high level of tolerance, that creates an opportunity to fish with the bait at the slowest speed and at different depths.

With unilateral turbine rotation — right or left

“GLISSER”, 36 g is intended for fast shallow fishing. The weighted tail part lifts it onto the water surface and creates

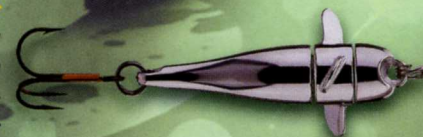

a breaker, attracting the predatory fish. People catch on it chub, salmon, sheat-fish, pike-perch, pike, etc.

“FANTOM”, 30 g allows long-distance casting. It's intended for catching such large predatory fish as salmon, pike-perch, chub, pike, etc.

“METEOR”, 21 g allows long-distance casting. It's intended for catching such large and middle-sized predatory fish as pike, chub, pike-perch, ide, etc.

“SHMEL”, 14 g allows distance casting. People catch on it pike-perch, chub, ide, lake trout, perch. It has given a good account of itself, especially for catching pike.

“CYCLOP”, 8 g — microdevon. It allows accurate distance casting. It's intended for catching chub, pike, ide, trout, umber, etc. It is an outstanding bait for perch fishing.

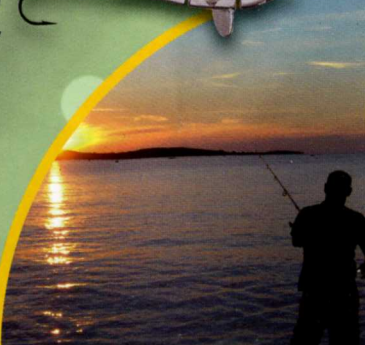

“MOSKIT”, 6 g — microdevon. It's intended for fishing with light fishing-tackles, including ultralight. It's intended for catching chub, ide, umber, trout and perch.

These 6 models are made of silver.

Size at the photos – 0,75 (75% of the real size).

When fishing it's recommended to use baits with «right» and «left» rotation to prevent the fishing-line twisting. It's necessary to change them every 10-15 casts.

Devon with double-sided rotation — "STREKOSA"

It was created by studying the influence of the rotation of microturbines on the reflex reactions of the predatory fish. It's a result of numerous tests. There are 2 turbines mounted in the DEVON's base. These turbines rotate in opposite directions, that's why the fishing line doesn't turn over, when DEVON moves at great speed against the stream. These perspective spoon-baits enable great numbers of the predatory fish to be caught.

Devon «STREKOSA», 29 g

Used for fishing in deep rivers with a strong current. It is good for asp, pike perch, pike, salmon, chinook, taimen fishing and the like. (coating at the photo – copper)

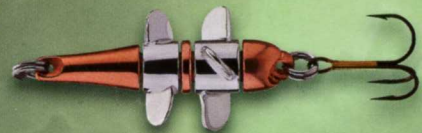

Devon «STREKOSA», 21 g

Used for fishing in rivers with strong and medium current, lakes and ponds.

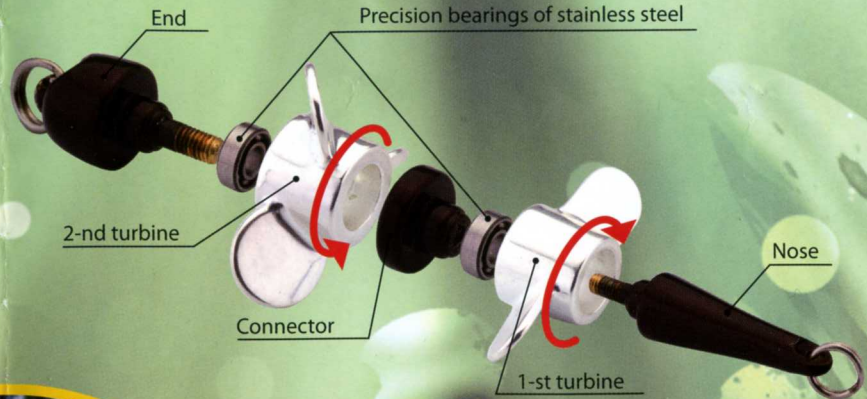

It is good for asp, pike, pike perch, large chubs, salmon, coho, chinook fishing and the like (coating at the photo blackening)

Devon «STREKOSA», 16 g

Used for fishing in lakes, ponds, estuaries, shallow rivers with different speed of current. It is perfect for pike, perch, chub, trout, ide, grayling, lenok and the like. (coating at the photo silver)

Size at the photos – 0,75 (75% of the real size).
